

## **Marijuana MEDICINE for Cancer Patients... What You Need To Know**

Throughout man's history marijuana has always been known as one of the most therapeutic plants in the world.

Marijuana is not addictive.

Our research, backed by hundreds of other studies done worldwide, has proven properly made marijuana medicine provides relief for HIV/Aids patients. Throughout thousands of years of medicinal use marijuana has been known as a cure-all and not without good reason. We have provided marijuana medicine to hundreds of people with various medical conditions and the results speak for themselves.

Millions of people enjoy smoking marijuana, but this is the least effective way to use the plant medicinally. The real medical miracles occur when the marijuana is ingested, drank in tea, cooked in cookies/brownies or used topically on skin infections or diseases - then watch what happens! Marijuana is real medicine straight from Mother Nature, not some concoction of chemicals and poisons produced in a pill factory somewhere.

### **Supporting Documentation:**

US News.... April 2009    Headlines Read... Active Ingredients in Marijuana Kills Brain Cancer Cells... by Alan Mozes

The finding is based on work with mice designed to carry human cancer tumors, as well as from an analysis of THC's impact on tumor cells extracted from two patients coping with a highly aggressive form of brain cancer. The findings were published in the April issue of The Journal of Clinical Investigation.

Fox News.... November 2007    Headlines Read... Marijuana Compound May Stop Breast Cancer From Spreading, Study Says... by scientists at California Pacific Medical Center Research Institute

"Right now we have a limited range of options in treating aggressive forms of cancer," said lead researcher Dr. Sean D. McAllister, a cancer researcher at CPMCRI, in a news release. "Those treatments, such as chemotherapy, can be effective but they can also be extremely toxic and difficult for patients. This compound offers the hope of a non-toxic therapy that could achieve the same results without any of the painful side effects."

British Journal of Cancer.... August 2009    Headlines Read... Cannabis treats prostate cancer, study finds

Following the growing interest in medical benefits of cannabis, a new study finds that the compound can help fight prostate cancer. According to the study published

in the British Journal of Cancer, chemicals found in cannabis can stop prostate cancer cells from growing in the laboratory.

### **Testimonials:**

James D. Baehr... In 1994, I was diagnosed with inoperable prostate cancer.... the cancer had metastasized to my spine, hips, and ribcage. The neuropathic back pain was excruciating, emanating from my spine to my hips and ribcage. I also experienced an overall loss of strength that substantially limited my ability to work. I began taking numerous medications to treat the cancer, the excruciating pain that it caused, and the depression I felt as a result of my prognosis and the profound restrictions on my life. I decided to try a small amount of medical marijuana, and when I did I found that it provided significant relief from the side effects of the cancer medications and the radiation treatment. In addition, it helped reduce the pain I was experiencing from the cancer itself.... This new combination of therapies, which included medical marijuana, turned my health around. Where before I had been doubled over with nausea, couldn't eat, or sleep, I was now not only able to handle my medications, but could sleep, eat and manage my pain. I found that a small amount of medical marijuana taken in the evening enabled me to sleep through the entire night so that I no longer needed to take Ambien. Over time, the pain got progressively worse. In February 1997 I began to take morphine to help with the pain. The amount of morphine that I need to take to adequately control my pain leaves me utterly incapacitated, mentally and physically. Medical marijuana helps me manage my pain, while limiting my dependence on more powerful narcotics. When I smoke medical marijuana, I can achieve the same degree of pain relief with a much smaller amount of morphine and with far fewer and less harsh side effects. The coupling of medical marijuana with my prescription analgesics has been one of the most significant and successful aspects of my medical treatment.

Cole Krawitz... When I began chemotherapy, I was knocked out from severe nausea, vomiting and diarrhea. Before long my blood counts were so low I was injecting daily booster shots to keep my blood generating. My body had gone into complete shock. My veins shut down. I couldn't bend my left elbow. Severe nausea left me unable to eat or drink water, and after my second treatment, I was hospitalized with no white blood cells to defend my body against a common cold. We learn to live with pain when we are sick, but we rely on effective pain management options. Doctor prescribed medical marijuana makes these options better. Not only is medical marijuana effective, it's substantially more affordable. Marinol (only comes as an oral dose of pure THC, making it difficult to regulate the intensity of the effects. Smoking marijuana allows patients to regulate the dose needed to address symptoms without feeling drugged) is almost twice the cost. In closing, at Medicinal-Marijuana.ca we will help you with Health Canada's Regulation and paperwork and get you on the Medical Marijuana Program. With your doctor's consent (the paperwork is available on this site for your doctor to fill out), you will be able to start receiving medical marijuana by prescription delivered right to your doorstep once a month! We will find you a designated grower who will supply you with your monthly prescription. We will guarantee the quality of the

marijuana you receive is the best BC Bud available and that your quantity is exactly what your prescription is (either 5g, 10g or 15g per day). To start receiving medical marijuana or for more information, contact us as soon as possible.
